

Colors & Typography

Pulled straight from the codebase, not guessed — the palette lives in `src/app/globals.css` as Tailwind v4 `@theme` tokens, and the fonts are loaded in `src/app/layout.tsx` via `next/font/google`. This page renders with the actual Inter and Poppins font files.

Color Palette

11 tokens across 3 families — navy for structure and text, steel as a cooler secondary, tan as the one warm accent — plus three neutrals for backgrounds.

#003060

Navy

`--color-navy` `bg-navy / text-navy`

The primary brand color. Body text, headings, header & footer backgrounds, primary buttons — used in 41 of the site's files.

#013d79

Navy Secondary

`--color-navy-secondary`

Hover state for navy buttons and links — a touch lighter so the interaction reads clearly.

#01376d

Navy Deep

`--color-navy-deep`

A darker navy variant used sparingly for active/pressed states and deep gradients on hero sections.

#4a738c

Steel

`--color-steel` `focus ring`

Secondary text and muted labels, icon strokes, and the site-wide keyboard focus outline color.

#8fa6b8

Steel Light

--color-steel-light

Borders and dividers that need to be visible without competing with navy text.

#afc0ce

Steel Lighter

--color-steel-lighter

Soft confirmation banners — e.g. the "thanks for reaching out" success message after a form submits.

#bfae99

Tan

--color-tan bg-tan

The one warm accent. Primary CTA buttons ("Submit", "Discuss your hiring needs"), text selection highlight.

#d8cbb6

Tan Light

--color-tan-light

Hover state for tan buttons — lightens rather than darkens, keeping the warm feel on interaction.

#edeae4

Cream

--color-cream body bg

The page background, set once on `body` in `globals.css`.

#f2f2f2

Mist

--color-mist

Card and panel surfaces that need to sit slightly apart from the cream page background — heavily used in the admin panel.

#e9e7e2

Mist Dark

--color-mist-dark

A slightly deeper neutral for hover states on mist-colored rows and subtle section dividers.

Typography

Two typefaces, one job each — Poppins carries every heading, Inter carries everything you actually read.

Poppins

Headings — `--font-heading`, applied to h1–h4

Connecting Exceptional Talent With Leading Employers

500 **What's included**

600 **On-demand experts**

700 **Contract Talent**

Inter

Body — `--font-sans`, the default for everything else

Scale your business with our contract talent solutions where we help you connect with specialized professionals who are ready to step in, add immediate value, and can convert into full-time hires.

400 Regular — paragraph text, form inputs

500 Medium — nav links, labels

600 Semibold — buttons, form field labels

700 Bold — emphasis, stat numbers

Source of truth: `src/app/globals.css` (color tokens under `@theme`) and `src/app/layout.tsx` (font loading via `next/font/google`). Change the values there and every page on the site updates — this reference just mirrors them.
